

Introducing the Audit Log Tool

When administrators add fields to the Encompass® Reporting Database as Audit Fields, it can be difficult to view a complete history of changes for a specific loan. The

built-in Audit Trail tool only allows searches for individual fields, making it tedious to gather a full picture. The Audit Log PowerTool™ simplifies this process by offering visibility and easy export options for all audit field data.

AUDIT LOG TOOL

KEY BENEFITS:

View Audit Field Count

Instantly see how many Audit Fields are currently active in the Reporting Database, helping administrators keep track of field usage.

Export Full History

Export all Audit Field history to a text file for easy copying into a spreadsheet. This allows for faster review and a more complete understanding of loan changes.

Simplify Diagnostics

Gain full visibility into the field history of a loan to troubleshoot data issues more efficiently and reduce time spent searching for answers.
